Swing GUI Builder is integrated with Netbeans

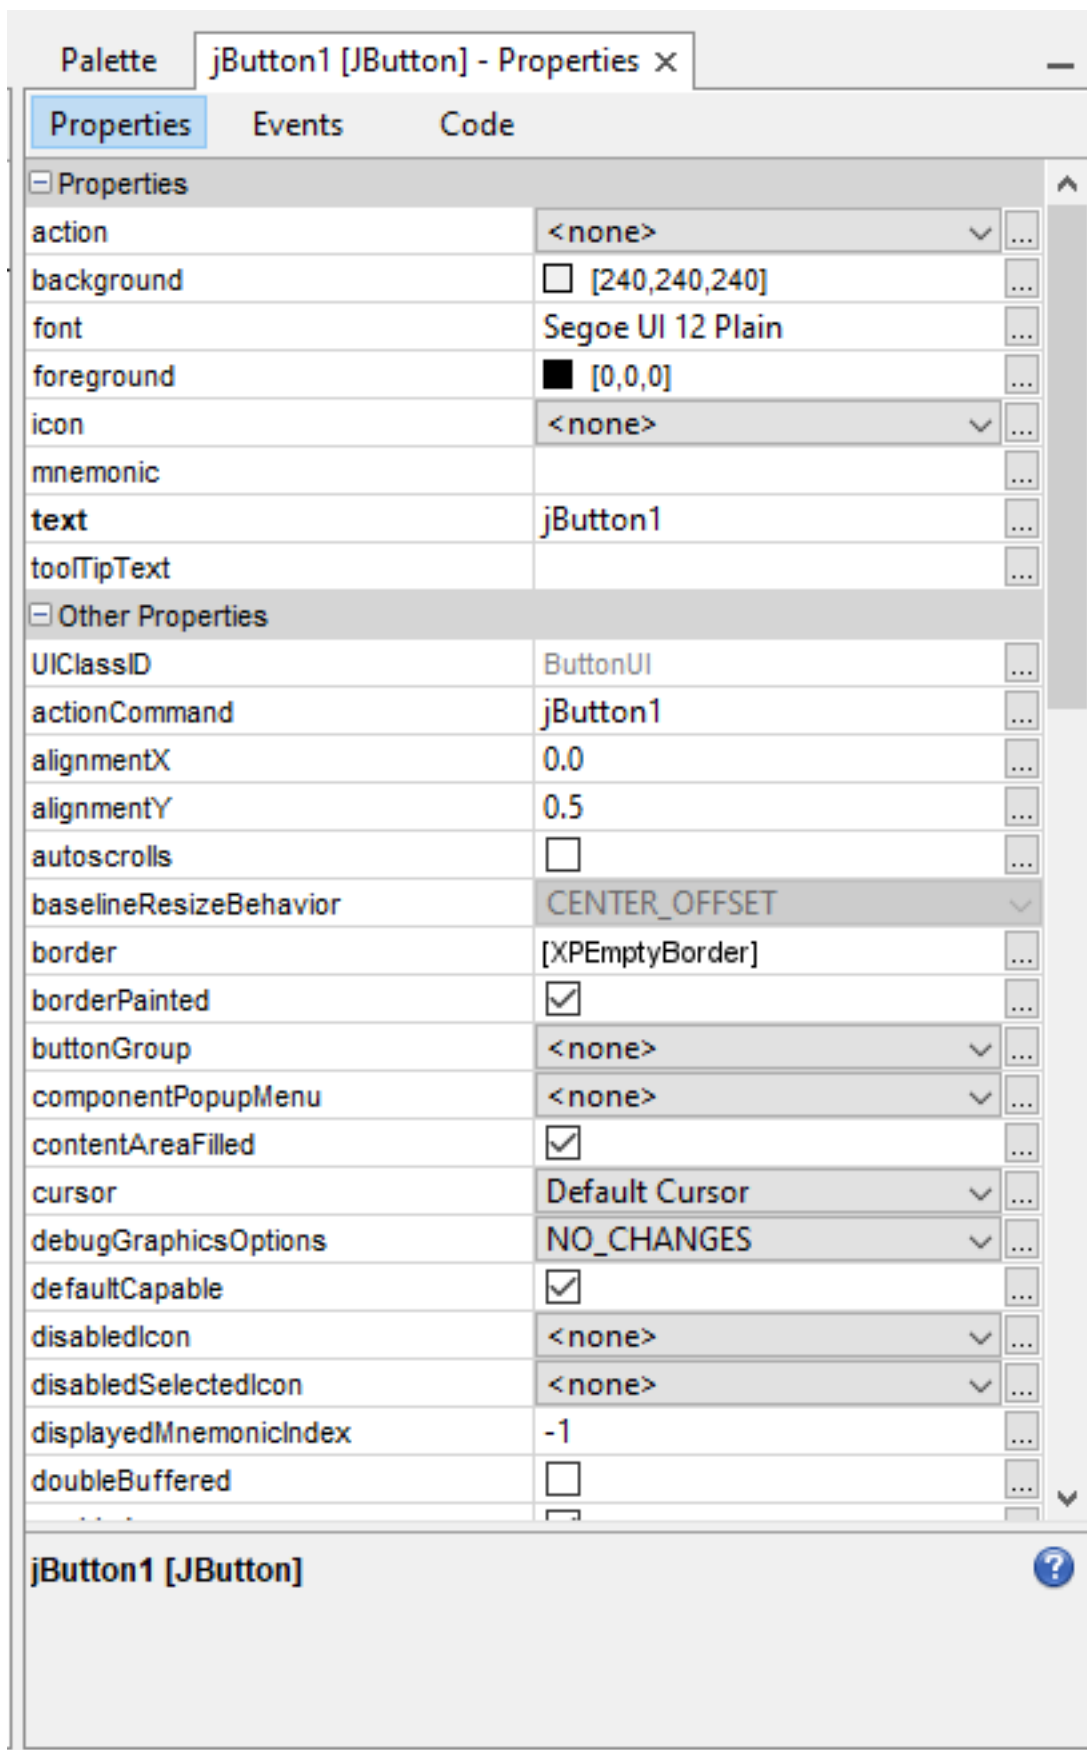

Drag-and-drop controls to panel from the palette

And from the events tab, add custom actions.

you can configure control properties from the properties screen

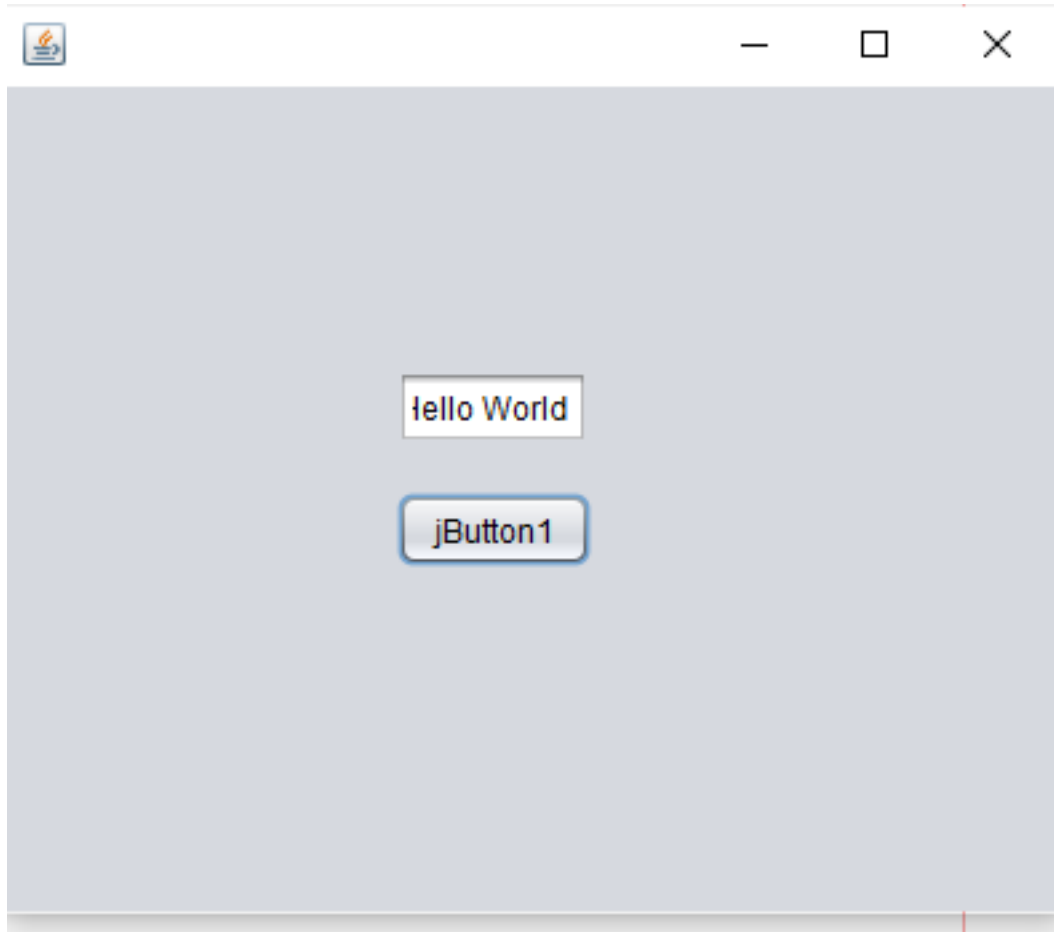

We can add simple events such as when the mouseClicked to button write text on the text field

“Hello World”

```
25     @SuppressWarnings("unchecked")
26     Generated Code
66
67     private void jButton1MouseClicked(java.awt.event.MouseEvent evt) {
68
69         jTextField1.setText("Hello World");
70         // TODO add your handling code here:
71     }
72
73     /**
74     * @param args the command line arguments
```

When you run application, you will see the following screen
